

Self-Assessment

Part A - Two Paragraphs: What was your individual contribution to this project? Did you apply and build upon the skills identified in your initial assessment from last Fall? What did you do and how did you do it? What did you learn and what competencies did you build? What were your successes, what were your obstacles?

I was the project manager for our senior design team. I was in charge of keeping everybody on track, setting deadlines for features of our projects and setting meeting times. On top of these duties, I also worked on the code of our web application, contributing to almost every page of our event application.

I worked on both the front-end side and back-end side of our project. I was able to learn a lot about the React framework and built upon my skills in JavaScript. I was also able to learn about how to use Python Django to work as our backend infrastructure. The biggest obstacle was learning how to use the backend and make it work with the frontend of the project but once that was figured out it was easy to continue working and adding features to the web application.
