

Final Self-Assessment

In this project, I focused on enhancing both the front-end and back-end aspects, particularly in User Authentication and Management using Clerk. This involved a learning curve, where I had to familiarize myself with Clerk's integration into our existing React and Django setup. Through this process, I deepened my understanding of system architecture and integration methods.

I built upon the skills identified in my initial assessment by further developing my proficiency in front-end and backend development, specifically in user authentication and management. Despite encountering obstacles such as compatibility issues, I persevered, learning the importance of adaptability and persistence in software development. My successes included successfully implementing the desired functionalities and optimizing performance, contributing to the project's success.

Our team accomplished significant milestones in developing this WebApp, especially none of us with this tech stack before, and it is a learning process for all of us. We learned valuable lessons about effective group work, including the importance of clear communication and division of tasks based on individual strengths.

While successful aspects of teamwork included mutual support and collaboration, we also faced challenges such as misaligned timelines and differing technical expertise levels among team members. Each member made unique contributions to the project's success, with special recognition deserving to Kevin Nugyen for his exceptional leadership within the team.
